

Gentlemen: Since discovering the pleasure of Satellite Radio, I take it with me everywhere I go. I spend a lot of time in travel for work....commuting between cities for sales calls and the like. This radio helps me stay informed and entertained while I'm on the road. I understand that there are forces which would like to limit XM's ability to broadcast local weather and traffic news. Of course it's just this kind of information which will help me greatly in my work/travel. I urge any public officials who will be voting on this issue to encourage the unfettered growth of XM's quality and services. I would be very discouraged to hear that Satellite Radio's continuous improvement should be thwarted by competitive interests. Improvements in technology, productivity and service are in the best interest of all citizens. Sincerely, Ken Piercy
